**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 9-16, and 18-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Ohno (5,933,676).

Ohno discloses a printer system including a printer 102, printer engine 105, external devices 101, and a network 106 connecting the printer 102 to the external devices 101. A printer controller 103 performs communication with the plurality of external devices 101. The printer 102 have a sensor unit for detecting various conditions including changes in environmental conditions such as changes in external temperature, the number of pages to be printed, and the remaining amount of toner. Note column 4, line 60- column 6, line 50; and column 7, lines 9-14. The printer controller 103 comprises a RAM, as a storage memory used by the CPU 309; 310, an EEPROM configured with a non-volatile memory for storing control information, such as a density correction table, for example. Note column 7, line 65-column 8, line 11. An engine controller 150 supervises an occurrence of changes in the printing conditions, which requires calibration, at any time. When any change in printing conditions occur, the engine controller 150 notifies information on the change in the printing conditions to the printer controller 103. Note column 8, lines 37-44.

***Allowable Subject Matter***

Claims 5-8 and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Groenteman, Ferrer et al., Hirata et al., Miyawaki, Lamberson et al., Miyachi, and Hille disclose art in remote monitoring of image forming devices. Wada, Kitajima, and Takemoto et al. (Japan, 391) disclose art in detecting temperature and humidity in image forming devices.
